

Unlayering Digital Equity: Empowering More Students with iPad webinar

Click the image for video.

Providing more students with equal access to technology tools ? often referred to as digital equity ? is a challenge for many schools around the country. Digital equity extends beyond the classroom walls and encompasses not only devices, but Internet access, available apps, and the quality of the education experience.

To help you obtain this level of education nirvana, Apple's ecosystem and mobile device management enable adjustments to students' learning experience on iPad that open the door for achieving equity initiatives, learning objectives and digital citizenship programs.

In our webinar, **Unlayering Digital Equity: Empowering More Students with iPad**, Dave Saltmarsh, Jamf's global education evangelist, examines a path towards equal technology opportunities and explains how schools can go beyond simply offering minimal iPad access during classroom time.

You'll learn:

- How schools can provide students with the technology resources they need
- Device management's role in offering digital equity
- Ways to enable IT, educational technologists and teachers to support the learning experience

Take the first step on your journey of digital equity at your school and a vision of technology for all.
